GREEN & GROOVY

Streetlife is a design driven company with a passion for creating innovative design elements for public spaces. We create products that are natural in style and use the landscape as a starting point of design process. Every day we experience the synergy by working closely together with landscape designers and architects.

There is a positive trend and increasing demand for greenifying urban spaces. The Streetlife Collection includes forward-thinking solutions for urban trees and mobile green. We present our collection of Green Products in this brochure "Green&Groovy".

In the center of this brochure, you will find the bright green booklet, including an overview of all the green products in the Streetlife Collection and our unique Treetec™-system, which encourages and sustains natural green growth in urban spaces.

Please do not hesitate to contact us for more information about our products or technology. Our team of advisors is technically skilled, speaks many languages and is enthusiastic to work with you!

Team Streetlife

In June 2024, the entire Streetlife team went on a work-excursion to London. There we visited the following realized Streetlife projects:

- Queen Elizabeth Olympic Park (London 2012)
- Elephant Park
- Gasholder Park (King's Cross)
- Battersea Power Station
- Triptych Bankside (*see photo right*)
- Gravesend Bus Hub
- Various projects in the city center of Southend-on-Sea

's-Hertogenbosch, NL

St. Geosmes, FR

EN

The Lean Green Circular and Oblong Benches are versatile seating options with integrated greenery, perfect for urban areas. The Circular Bench features a central tree planter made from glass-fiber composite or steel, with FSC®-certified hardwood or Bamboo Brown slats. The Oblong Bench is narrower, making it very applicable for transit areas such as sidewalks or malls. Both benches are pre-assembled and made from sustainable materials, enhancing urban spaces.

FR

Les Bancs Lean Green Circulaires et Oblongs sont des solutions d'assises polyvalentes avec un espace vert intégré, idéales pour les espaces urbains. Le Banc Circulaire se compose d'un bac central en matériau composite renforcé de fibres de verre ou en acier, l'assise est en bois dur certifié FSC® ou en Bamboo Brown. Les bancs Oblong sont plus étroits, ce qui les rend particulièrement adaptés aux zones de transit telles que les trottoirs ou les centres commerciaux. Les deux bancs sont livrés entièrement préassemblés. Fabriqués à partir de matériaux durables ils permettent de végétaliser les espaces urbains.

DE

Die Lean Green Rundbänke und Oblong Bänke sind vielseitige Sitzmöglichkeiten mit integriertem Grün, ideal für die Bereicherung städtischer Räume. Die Rundbank hat einen zentralen Baumkübel aus glasfaserverstärktem Kunststoff oder Stahl, mit FSC®-zertifiziert Hartholz oder Bamboo Brown Latten. Die Oblong Bench ist schmaler und eignet sich daher sehr gut für Durchgangsbereiche wie Bürgersteige oder Einkaufszentren. Beide Bänke sind vormontiert und aus nachhaltigen Materialien gefertigt.

NL

De Lean Green Cirkelbanken en Oblong Banken zijn veelzijdige zitmogelijkheden met geïntegreerd groen, perfect voor stedelijke omgevingen. De Cirkelbank heeft een centrale boomcontainer van glasvezelversterkt kunststof of staal, met FSC®-gecertificeerde houten of Bamboo Brown latten. De Oblong Bank is smaller, waardoor deze zeer geschikt is voor doorganggebieden zoals trottoirs of winkelcentra. Beide banken worden gemonteerd geleverd en zijn gemaakt van duurzame materialen die stedelijke ruimtes verrijken.

EN

The Big Green Benches are made of Corten or double powder coated steel with a hardwood sitting edge. These wooden beams are for the most part embedded in the steel structure by means of the integrated Streetlock fix-and-replace system. The border seats can be mounted one-sided, double-sided and corner-sided, as well as all around. All Black beams can be applied as an alternative to hardwood. The steel structure is available with a Closed Base so that the bench remains moveable, or optionally with an Open Bottom so that a tree can take root in the open ground.

FR

Les Big Green Benches sont des bacs en acier Corten ou en acier thermolaqué bicouche avec une assise en bois dur. Les poutres des assises sont intégrées dans la structure en acier avec le système Streetlock "fix and replace". Les assises peuvent être configurées sur un côté, deux côtés, en angle ou sur tout le contour. Le matériau All Black est une alternative au bois dur. Les bancs sont déplaçables grâce à la structure acier avec fond fermé. La version sans fond, disponible en option, permet aux arbres de prendre racine en pleine terre.

DE

Die Rough&Ready Big Green Benches sind aus Cortenstahl gefertigt wobei die Holzbalken der Sitzauflagen größtenteils mithilfe des Streetlock Fix-and-Replace Systems in die Stahlkonstruktion integriert sind. Die Sitzauflagen können einseitig, doppelseitig, über Eck oder rundum angebracht werden. All Black-Balken können als Alternative zum Hartholz verwendet werden. Die Pflanzkübel können mobil oder optional mit offenem Boden ausgeführt werden, so dass Bäume auch in der Erde wurzeln können.

NL

De Big Green Benches zijn gemaakt van Corten of gepoedercoat staal, waarbij de houten balken grotendeels in de plaatconstructie zijn opgenomen door middel van het geïntegreerde Streetlock Fix-and-Replace Systeem. De zitranden kunnen enkelzijdig, dubbelzijdig, overhoeks of rondom toegepast worden. All Black balken zijn als alternatief voor het hardhout toe te passen. De plaatconstructie kan verplaatsbaar uitgevoerd worden of optioneel met Open Bodem, zodat bomen ook in de ondergrond kunnen wortelen.

Solid Mobile Green Isles

Zoeterwoude, NL

EN

The Solid Mobile Green Isles (MGI) are moveable rectangular steel planters with integrated seats of hardwood or Cloudy Grey (recyclate). The MGI system is suited for flat paved surfaces. The prefab elements are easily installed in a matter of hours with the Streetrail System. The portable modules are installed on the plastic rail beams, which are placed on the surface below the full length of the configuration.

FR

Les Solid Mobiles Green Isles (MGI) sont des bacs de plantations en acier, déplaçables, avec assises intégrées en bois dur ou Cloudy Grey (recyclé). Le système Mobile Green Isle est conçu pour des surfaces pavées planes. Les éléments préfabriqués sont facilement installés en quelques heures avec le système Streetrail. Les modules portables sont installés sur les poutres des rails en plastique, qui sont placées sur la surface en dessous de toute la longueur de la configuration.

DE

Die Mobile Green Isles (MGI) sind transportable Pflanzmodule aus Stahlblech mit integrierten Sitzauflagen aus Hartholz oder dem Rezyklat Cloudy Grey. Das Mobile Green Isle System wird auf einem ebenen, tragfähigem Untergrund aufgestellt. Die vorgefertigten Elemente werden mithilfe des Streetrail Systems in nur wenigen Stunden montiert. Die bewegliche Module werden auf den Kunststoffschienenträgern installiert, die auf der Oberfläche unter der gesamten Länge der Konfiguration angebracht sind.

NL

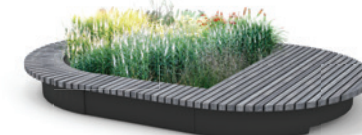

De Solid Mobile Green Isles (MGI) zijn verplaatsbare stalen plantenvakken met geïntegreerde zittingen van hardhout of Cloudy Grey (recyclate). Het MGI systeem wordt geplaatst op een vlakke verharde ondergrond. De prefab elementen worden in slechts enkele uren geplaatst door middel van het Streetrail Systeem. De verplaatsbare modules worden geïnstalleerd op de kunststof railbalken, die over de volledige lengte van de configuratie op het oppervlak worden geplaatst.

Treetec™ system & Biodegradable Columns

With Treetec™ Bottom Up (TTBU), the water reservoir is situated at the bottom of the tree tub. Vertical capillary columns let water circulate to the roots. The reservoir's tubes provide improved water circulation that significantly reduces the frequency with which watering and maintenance are required in the growing season.

After a few years, the capillary columns are no longer needed, although they should not be removed so as to avoid damage to the root ball. In addition to the non-biodegradable columns, Streetlife has developed biodegradable versions. Over time, these biodegradable columns will decompose and be absorbed into the substrate.

The four stadiums of the Biodegradable Capillary Columns are depicted below:

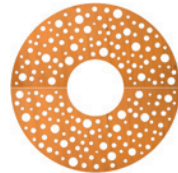

- The installation of the columns against the root cloth.
- The first root growth in the column structure. First decrease of moisture-retaining fibers in the column.
- Further root growth in the columns. Partial degradation of the cylindrical column.
- A fully grown column structure has replaced the original capillary column. An optimal retention of water and oxygen by the roots now exists.

The Municipality of The Hague has created a beautiful connection between Central Station and the city center at “de Haagse Loper” featuring elegant Corten Love Tub tree planters. These planters use the innovative Treetec™ Bottom Up system, which promotes growth in trees transplanted from open ground by providing root ball anchoring, temperature protection, and capillary columns for optimal moisture.

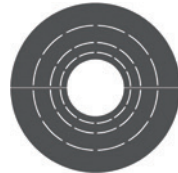

The city's green services department monitors moisture levels with wireless sensors for targeted watering. Studies show that the Treetec™ system reduces extra water needs by 30-50%, resulting in healthier trees and significant maintenance savings.

EN

For the final phase of Chicago's Riverwalk East, Site Design Group selected products like Drifter Linear Structures and Picnic Tables, inspired by harbor mooring posts. These contrast with sleek Solid Skirt Benches overlooking the water, while Solid Podium Surf Isles mimic river ripples. A large, custom undulating platform, developed with Streetlife, further enhances the site, showcasing a cohesive design through a range of distinctive Streetlife products.

FR

Pour la dernière phase du Riverwalk East de Chicago, Site Design Group a choisi des produits tels que les Structures Drifter Linear et les Sets de Pique-nique, inspirées des poteaux d'amarrage des ports. Ces éléments contrastent avec les Bancs Solid Skirt épurés, qui surplombent l'eau, tandis que des Solid Podium Surf imitent les ondulations de la rivière. Une grande plateforme sur mesure, développée avec Streetlife, améliore encore le site, mettant en valeur une conception cohérente à travers une gamme de produits distinctifs Streetlife.

DE

Für die letzte Phase des Riverwalk East in Chicago wählte Site Design Group Produkte wie die Drifter Linear Structures und Picknicksets, die von Duckdalben inspiriert sind. Diese stehen im Kontrast zu den eleganten Solid Skirt Bänken, die den Blick auf das Wasser freigeben, während die Solid Podium Surf Isles die Wellen des Flusses nachahmen. Eine große, maßgeschneiderte, wellenförmige Plattform, die in Zusammenarbeit mit Streetlife entwickelt wurde, wertet den Standort weiter auf und präsentiert ein harmonisches Design durch eine Reihe markanter Streetlife-Produkte.

NL

Voor de laatste fase van de Riverwalk East in Chicago koos Site Design Group voor producten zoals de Drifter Linear Structures en picknicktafels, geïnspireerd door meer palen. Deze contrasteren met de strakke Solid Skirt Banken die uitkijken over het water, terwijl de Solid Podium Surf Isles de riviergolven nabootsen. Een grote, op maat gemaakte golvende platform, ontwikkeld in samenwerking met Streetlife, versterkt de locatie verder en toont een samenhangend ontwerp met een reeks opvallende Streetlife-producten.

Solid Surf Isles 2D

EN

The Rough&Ready Tree Isles enable unique designs, from square to free-form shapes. A minimum three-meter diameter is needed to include a Rough&Ready border seat. These seats are made from FSC hardwood, Accoya, Douglas or All Black (recyclate). The following images showcase various Tree Isle shapes, with the Italic version's angled walls providing extra legroom and a dynamic appearance. Main dimensions can be customised on request.

FR

Les îlots d'Arbres Rough&Ready permettent des conceptions uniques, allant des formes carrées aux formes libres. Un diamètre minimum de trois mètres est nécessaire pour inclure une assise Rough&Ready dans le muret en acier. Ces assises sont fabriquées en bois dur FSC, bois Accoya, Douglas ou All Black (recyclé). Les photos présentent différentes formes de Tree Isles. La version Italic, avec murets inclinés, a un aspect dynamique et offre plus d'espace pour les jambes. Les dimensions des îlots peuvent être personnalisées sur demande.

DE

Die Rough&Ready Tree Isles ermöglichen einzigartige Designs, von quadratischen bis hin zu freien Formen. Ein Mindestdurchmesser von drei Metern ist erforderlich, um eine gebogene Rough&Ready Sitzauflage realisieren zu können. Die Sitzauflagen bestehen aus FSC-Harholz, Accoya, Douglas oder aus All Black (Rezyklat). Die folgenden Bilder zeigen verschiedene Ausführungen der Tree Isles, wobei die schrägen Wände der Italic-Version mehr Beinfreiheit bieten und eine dynamische Erscheinung verleihen. Die Hauptabmessungen können auf Anfrage angepasst werden.

NL

De Rough&Ready Tree Isles bieden de mogelijkheid voor unieke ontwerpen, van vierkante tot vrije vormen. Een minimale diameter van drie meter is nodig om een Rough&Ready randzitplaats toe te voegen. Deze zitplaatsen zijn gemaakt van FSC-hout, Accoya, Douglas of All Black (recycleat). De onderstaande afbeeldingen tonen verschillende vormen van de Tree Isles, waarbij de schuine wanden van de Italic-versie extra beenruimte bieden en een dynamisch uiterlijk geven. De hoofdafmetingen kunnen op aanvraag worden aangepast.

Solid Podium Isles & Terraces

Cleveland, USA

EN

Solid Podiums and Terraces can transform public spaces. The Podiums create a geometric stage with seating, performance areas, and green zones, available in standard or custom sizes. Solid Terraces offer tiered seating with FSC hardwood slats and a Corten steel base. Alternatively, Cloudy Grey slats, a sustainable recyclate, provide a maintenance-free, unique look. Both products are customisable to project needs, promoting social interaction and recreation.

FR

Les Solid Podiums et les Solid Terraces transforment les espaces publics. Les Podiums créent une scène géométrique avec assises, zones de performance et espaces verts, ils sont disponibles en tailles standard ou sur mesure. Les Solid Terraces offrent des assises en gradins en bois certifié FSC soutenus par une base en acier Corten. Les lames en Cloudy Grey, un recyclat durable, offrent une solution sans entretien avec un aspect unique. Ces produits sont personnalisables selon les besoins du projet, et favorisent l'interaction sociale et les loisirs.

DE

Solid Podiums und Terraces verwandeln öffentliche Räume. Podiums schaffen eine geometrische Erhebung mit Sitzgelegenheiten, Bühnenflächen und Grünzonen, erhältlich in Standard- oder Sondergrößen. Solid Terraces bieten gestufte Sitzplätze aus FSC Hartholz Balken, unterstützt von einer Cortenstahlbasis. Als Alternative bieten Balken aus Cloudy Grey, einem nachhaltigen Recyclingmaterial, eine wartungsfreie Lösung mit einzigartigem Aussehen. Beide Produkte sind anpassbar und fördern soziale Interaktion sowie Freizeitaktivitäten.

NL

Solid Podiums en Terraces transformeren openbare ruimtes. De Podiums creëren een geometrisch podium met zitplaatsen, performance- en groenzones, verkrijgbaar in standaardmaten of op maat. Solid Terraces bieden zitplaatsen in trappen van FSC-houten latten, ondersteund door een Corten stalen basis. Cloudy Grey latten, een duurzaam recyclaat, bieden een onderhoudsvrije oplossing met een uniek uiterlijk. Beide producten zijn op maat te maken en bevorderen sociale interactie en recreatie.

Both the straight and curved Rough&Ready Seat Wall models generally require customisation. An easy LED-ready solution is achieved by fitting an LED-strip in a mounting recess on the underside of two Rough&Ready beams. This illuminates the entire support frame. A second LED-ready solution is achieved by fitting LED elements behind the Corten Seat Wall, perforated with a pattern which the light shines through.

FR

Les Seat Walls Rough&Ready tant dans leur exécution droite que courbe, se prêtent particulièrement bien à des réalisations sur mesure. Nous proposons deux solutions d'éclairage. La première consiste à placer une bande LED dans une rainure spécialement aménagée à l'intérieur du mur d'assises, éclairant ainsi celui-ci sur toute sa longueur. La seconde concerne plus particulièrement les assises montées sur un châssis en acier à motif perforé. Dans ce cas, il est possible de fixer en option des éléments d'éclairage LED au dos de la tôle.

DE

Die Rough&Ready Seat Walls, sowohl in gerader als auch in gebogener Ausführung, werden vielfach nach Maß angefertigt. Bei der einfachen LED-Ready-Lösung kann ein LED-Strip in eine spezielle Montagerinne integriert werden. Bei dieser Lösung wird die gesamte Wand angeleuchtet. Bei der zweiten LED-Ready-Lösung ist die Rough&Ready Seat Wall mit einem Lochmuster perforiert und mit optionalen LED-Elementen dahinter versehen.

NL

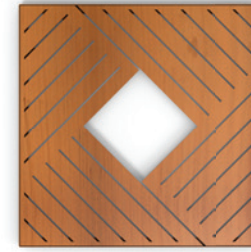

De Rough&Ready Seat Walls, zowel in rechte als gebogen uitvoering, zijn veelal maatwerk. Bij de eenvoudige LED-ready oplossing kan er een LED-strip in een speciale montage goot opgenomen worden. De gehele wand wordt bij deze oplossing belicht. Bij de tweede LED-ready oplossing is de Corten Seat Wall, geperforeerd met een gaten patroon met optionele LED-elementen erachter.

Open Pillars and High Grass Pillars add dynamic vertical elements to urban spaces. Open Pillars are triangular CorTen steel structures with patterns that support climbing plants. Optional LED lighting at the base makes them vibrant at night. High Grass Pillars are flared masts, resembling beach grass, ideal for greenery. An optional steel base plate for spotlights can be added. Both pillars offer sustainable, eye-catching solutions for urban spaces.

FR

Les Open Pillars et High Grass Pillars ajoutent des éléments verticaux dynamiques aux espaces urbains. Les Open Pillars sont des structures triangulaires en acier Corten avec des motifs, soutenant les plantes grimpantes. Un éclairage LED optionnel à la base les rend lumineux la nuit. Les High Grass Pillars, ressemblant à des herbes de plage, sont idéaux pour la verdure. Une plaque de base en acier pour des projecteurs peut être ajoutée. Les deux piliers offrent des solutions durables et attrayantes pour les espaces urbains.

DE

Open Pillars und High Grass Pillars bringen dynamische vertikale Elemente in städtische Räume. Open Pillars sind dreieckige Cortenstahl Strukturen mit Mustern, die Kletterpflanzen unterstützen. Optionales LED-Licht an der Basis macht sie nachts lebendig. High Grass Pillars, die an Strandgras erinnern, sind ideal für Begrünung. Eine optionale Stahlplatte für Spotlights kann hinzugefügt werden. Beide Säulen bieten nachhaltige, auffällige Lösungen für urbane Räume.

NL

Open Pillars en High Grass Pillars voegen dynamische verticale elementen toe aan stedelijke ruimtes. Open Pillars zijn driehoekige Corten-stalen structuren met patronen die klimplanten ondersteunen. Met optionele LED-verlichting in de bodem geven ze 's nachts een levendig beeld. High Grass Pillars, geïnspireerd op duingras, zijn ideaal voor vergroening. Een stalen basisplaat voor spotlights kan worden toegevoegd. Beide palen bieden duurzame, opvallende oplossingen voor stedelijke ruimtes.

Matrix Font London Underground

The font on the cover is inspired by the Dot Matrix Font of the London Underground. This dotted font is visible on the electric arrival boards and metro line signs. A design seen by thousands of people every day in London. Over the years this font became an historic part of the Underground, for it has been used since 1996.

Gmund Bio Cycle

The cover paper is made from plant fibers and is compostable, thus providing nutrients to grow new plants. A perfect ecological cycle. Up to 50% of this paper is made from resource-saving fibers such as wheat straw, grass, cotton and cannabis.
